DETAILED ACTION

Remarks

This Office Action fully acknowledges Applicant's remarks filed on February 14th, 2008.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on February 14th, 2008 has been entered.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with David Dougherty on February 25th, 2008.

The application has been amended as follows:

Claim 1. (Currently Amended) A flow injection electrochemical ~~detecting~~ device

comprising:

a base (10) with a top, a front end, a rear end, and sides, and having a recess (12) defined in the top extending to the front end and a pivotal post (11) formed near the rear end;

a working electrode (50) being placed inside the recess (12);

a cover (20) with a top, a bottom, a front end, a rear end and two sides, which pivotally mounts on the base (10) and has a cutout (21) defined at the rear end to receive the pivotal post (11) of the base (10), a pin (111) penetrating the cover (20) at the cutout (21) and the pivotal post (11) to pivotally connect the cover (20) to the base (10), an annular trench (28) defined in the bottom of the cover, a resilient separator with an inner opening, which is an O-ring (282) and is partially mounted in the annular trench (28) of the cover (20), and multiple channels defined in the cover (20) and each having an opening at an area within the annular trench (28) to communicate with the inner opening of the resilient separator; [[and]]

said cover (20) including a first outlet (24) and a second outlet (26) and an reference electrode (30) and auxiliary electrode (40) engaged within said first outlet and said second outlet respectively; and

a locking device attached between the base (10) and the cover (20).

Claim 2. (Currently Amended) The flow injection electrochemical detecting device as claimed in claim 1, wherein

two ball dents (23) are defined at the front end of the cover (20); and

the locking device comprises:

two locating posts (14) formed on the top of the base (10) at the front end and
each of the two locating posts (14) having

a threaded hole (142) defined through the locating post (14);

a threaded rod (18) screwing into the threaded hole (142) and having a
bore (182) defined in the threaded rod (18);

a resilient element (184) accommodated inside the bore (182);

a ball (186) retractably mounted inside the locating post (14) and
mounted on the resilient element (184) to detachably engage and lock with a ball dent
(23).-

Claim 3. (Currently Amended) The flow injection electrochemical ~~detecting~~ device
as claimed in claim 2, wherein the cover (20) further has two side cutouts (25) defined
at the front end to match with the locating posts (14) and the two ball dents (23) are
respectively defined in periphery of the two side cutouts (25).

Claims 4 (Cancelled)

Claim 5 (Cancelled)

Claim 6. (Currently Amended) The flow injection electrochemical ~~detecting~~ device
as claimed in claim 3, wherein the resilient element is a spring.

Claim 7 (Cancelled)

Claim 8 (Cancelled)

Claim 9 (Currently Amended) The flow injection electrochemical ~~detecting~~ device as claimed in claim 1, wherein the multiple channels are:

an inlet (22) defined through the cover (20) from the top and having an opening (221) at the area within the annular trench (28);

a first outlet (24) defined in the cover (20) from one side and having an opening (241) at the area within the annular trench (28); and

a second outlet (26) defined in the cover (20) from another side and having an opening (261) at the area within the annular trench (28).

Claim 10 -17 (Cancelled)

Claim 18 (Currently Amended) The flow injection electrochemical ~~detecting~~ device as claimed in claim [[14]]1, wherein the recess (12) is a dovetail recess having a width tapering toward the top of the recess (12).

Claim 19 (Currently Amended) The flow injection electrochemical ~~detecting~~ device as claimed in claim [[14]]1, wherein the base (10) further has multiple grooves defined in the sides of the base to make the base easily held.

The following is an examiner's statement of reasons for allowance: The closest prior art of record, Liljestrand (6,200,531), discloses a base and cover that may be affixed to each other or held together by a retaining device, as well as the base including a recess for a working electrode, but fails to disclose or fairly suggest the

structural relationship of a reference and auxiliary electrode with the cover as claimed in claim 1, and does not disclose or fairly suggest the pivotal post to pivotally connect the cover to the base, as well as a resilient separator as an O-ring, as claimed in claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
